

Amendments to the Specification:

Please replace the paragraph beginning on page 8, line 10 with the following amended paragraph:

The present invention also comprises a method for preparing [[an]] a temporary aqueous aerosol paint composition, in accordance with the composition presented above. The method of the present invention comprises charging a reaction vessel with an initial amount of an aqueous solvent which, as indicated above, comprises water in at least one embodiment. The method of the present invention also includes setting a primary mixing cycle for the contents of the reaction vessel. More in particular, setting the primary mixing cycle includes adjusting the mixing speed to a predetermined primary mixing speed, which may be expressed in revolutions per minute (rpm) of the mixing blade, and maintaining this predetermined primary mixing speed for a predetermined primary mixing time.

Please replace the paragraph beginning on page 14, line 6 with the following amended paragraph:

The at least one pigment compound of the aqueous component of the present invention comprises between generally about [[%5]] 5% to 25% by weight. Tables I through VII below contain exemplary formulations of the inventive composition of the present invention for a number of color variations, including generally the amount of specific pigment compounds in each.
